Java to implement implicit and explicit type casting

```java
package Narrow;

public class Typecasting {

    public static void main(String[] args) {

        //implicit conversion
        System.out.println("Implicit of the type casting");
         char a='A';
        System.out.println("value of a:" +a);

        int c=a;
        System.out.println("value of c:" +c);

        float e='d';
        System.out.println("value of e:" +e);

        long f='g';
        System.out.println("value of f:" +f);

        double i='k';
        System.out.println("value of i:" +i);

        System.out.println("\n");

        System.out.println("Explicit type casting");

        //explicit conversation
        double x=55.5;
        int y=(int)x;
        System.out.println("value of x:" +x);
        System.out.println("value of y:" +y);

    }

}
```

File   Edit   Source   Refactor   Navigate   Search   Project   Run   Window   Help

```
Implicit of the type casting
value of a:A
value of c:65
value of e:100.0
value of f:103
value of i:107.0

Explicit type casting
value of x:55.5
value of y:55
```
